## Comments/Questions

30 responses

Bouys installed by fishing opener

nasty geese over running lawns, and dnr/wildlife will not prohibit feeding.

Why do you let water level get so high before you open the dam? (always reactive, instead of proactive). My shoreline, and basement always suffer.

Don't increase fees.

What about bouys?

Lots of spots to run aground

Fox lake has bouys, why can't we?

More no wake buoys around islands where shore is close to island like by skunk islands. noticed boats and jet skis going full speed between shore and island almost daily. Need rough fish removal to begin again - lake has large population of rough fish and will only get worse. What is the chance that all lake property owners receive a free yearly pass for launching their boat. Most only launch it once a year in the spring and then take it out in the fall; this would be a minor offset to the fee that is added to our property taxes for the lake district.

Geese issue. Too many.

Weeds and algae less would be nice

Cormorants and pelicans do not cause "damage". They eat fish and have just as much right to them as recreational fishermen. The arrival of American White Pelicans is the best thing that has happened in my 25 years living on the lake. I love looking out my windows and watching them on the lake. Can't get enough of that.

Neither an annual budget nor financial statement has been released on [bdlakedistrict.org](http://bdlakedistrict.org) since the adopted budget in August of 2021. What is the Lake District doing to improve visibility to where our tax dollars are going?

Raise the level of lake. It's kept too low.

Need carp commercially fished.

Quit dropping the lake level

Hazard marking

Beaverdam lake is an amazing body of water. We are new to the lake but I absolutely love it. I really think that the Beaver Dam area should market the lake a lot more than it does. No one really knows how big this lake is and how nice it is to go for a boat ride on it. I think that would help increase of tourism dollars locally. Having some other commercial establishments on the water also would help. Having the must skis also performing during the summer is something kind of neat and unique to the area. Really there isn't much. I think that should be changed, I do realize that it's just a dirty body of water, because it's so shallow, all those boats going by, just turn up more mud.

Someone should mark beaker Island by woods liquor landing. Eating up props put there

Water quality!!!!

History/information on how/why chunks of concrete sidewalks were used as seawall. Does this damage the lake? Should they be removed and replaced with something different. I attended the restoration workshop, but it didn't really address the issue. I personally dislike them and find them to be unsightly.

Add more kayak piers

When will we see the benefits of all the money we are charged for this?

Farmers are often pointed to as the bad guy for pollution, but they are doing a lot to improve farm practices, working with land conservation. I wonder if non-farm residents are aware of the issues they create from fertilizers and herbicides on their lawns.

Better boat landings & associated piers

I'm unsure what damage the birds do. I would love to encourage their presence. I love watching them.

Get rid of the Carp and improve the fishing

Need to reduce carp and increase crappie walleye bass and northerns

Sure did a poor job on rebuilding state land and destroyed habitat in the process! Why is it our responsibility to repair state land and it's the property owners responsibility to repair their own? When are board members up for reelection. Please answer these questions at the meeting today at the Water Mark. We will be there waiting for a response!

Get rid of the no wake markers by the islands. They are confusing and unnecessary. One windy day creates more waves than a year's worth of boating. They are also a navigation hazard at night. Unlighted and too far from shore

If we are going to do something then it needs to be done so far I see nothing being done. Still alot of bird damage

On tressle bay at this time of years the weeds grow and makes the lake look awful. They die off and rot. Would it be possible to cut these ugly weeds? Can this bay also be treated to reduce algae blooms? How can we improve the water quality? Thank you.

Who has authority when it comes to what actually gets approved with the lake DNR, state government, any other local organisations that have input to what goes on with the lake? Where does the lake district stand with process of lake projects?

If you can present a QR code why can't you stream the meeting for those that are not able to attend meeting . This would allow you get more input
